ABOUT ME

During last three years my time was mostly occupied by working toward obtaining my business management bachelor, as well as working as a personal assistant of an event manager and lately as an event manager myself. The idea of becoming a Web-Dev came to my mind during the last year of studying, when I had my first contact with HTML and CSS at one of extra courses offered by University. Structuring information and shaping their design got me hooked immediately. Since then, I knew that someday I want to combine my managerial education with perfected knowledge of programming into position of Project Manager/Senior Developer. I believe that my work in Your company will be a stepping stone in that direction.

PROJECTS

Pokémon Battle Simulator

Code: <https://github.com/MateuszKowalskiCL/PokemonGame-simplified>

Game was a final project of Coder's Lab Boot Camp. Main goal was to recreate turn based Pokémon battles and complex damage calculations that take place during them. Entire game was built in React framework with support of Redux and Sass. Since it was my first project, the code isn't of the highest quality, but definitely represents logical and conceptual thinking that was required to plan an entire game on my own.

Portfolio Page

Code: <https://github.com/MateuszKowalskiCL/PortfolioPage>

Website was created to allow potential employers to know me and my projects better. Inspired with flat design and built with usage of simple ES6 and Sass Webpack configuration. Main focus of the code was to flex my Sass and RWD skills. I am most proud of contact form which neatly combines form validation and changing styles on its every step.

SKILLS

Programming languages: JavaScript, ES6, HTML5, CSS3

Frameworks/libraries: React, Redux, JQuery

Toolkits/Module-bundlers: Gulp, Webpack

IDE: WebStorm

Others: Sass, RWD
